

Make Micromobility Work

Micromobility programs are evolving quickly. From technology that's been around for 200 years (bikes) to around three years (e-scooters), micromobility offers affordable, environmentally friendly ways for people to reach their destinations.

Ride Report empowers cities around the world to better manage their micromobility programs.

Ride Report is a unified platform for real-time and historical shared mobility data. With access to this data, cities have the information they need to ensure compliance, achieve policy goals, and make data-driven decisions. Ride Report also advocates to operators on behalf of cities, leveraging relationships with those operators to help cities scale micromobility programs efficiently and equitably.

The bottom line? Ride Report makes managing your micromobility program easier so you can spend more time building and sustaining infrastructure and community.

With Ride Report, stay one step ahead with:

Real-time monitoring

Aggregated data from users and operators provides an accurate, up-to-the-minute picture of your right-of-way, so you know what's working and what's not.

Alerts, reports & invoicing

Automated reports and notifications sent directly to your inbox facilitate data-driven decision-making and priority-setting. They also allow for seamless invoicing and billing.

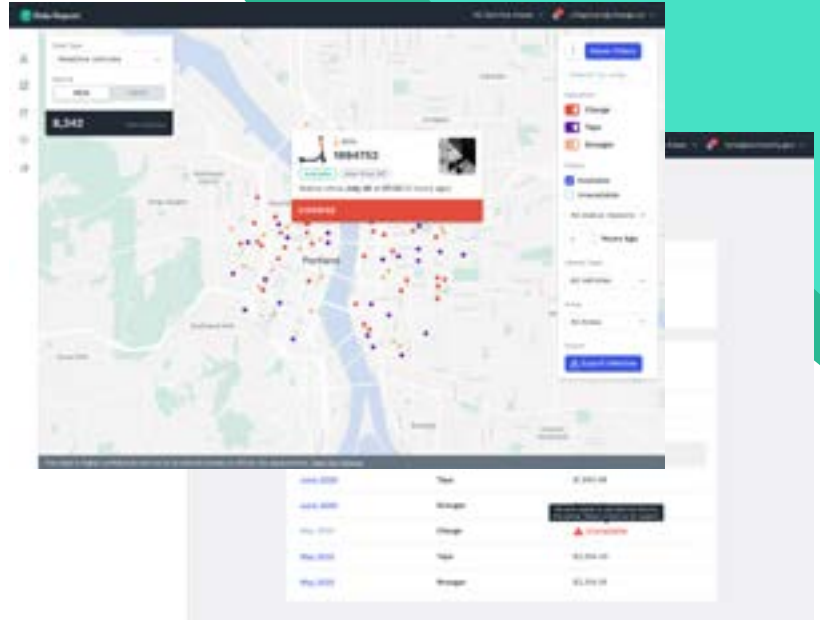

Data you can trust

World-class privacy protection for cities and citizens, providing the clarity you need while protecting those utilizing your infrastructure.

Building a micromobility ecosystem

Ride Report works with cities at every stage of their micromobility program, from policy definition and pre-permitting to operator insights to pilot to permanent rollout. The dashboard provides a common operating view from which cities and operators align on current and historical data and metrics in report, map, and graphical views. Ride Report is your source of truth for performance, response, and invoicing, allowing cities to anticipate challenges and get out of reactive mode to better serve their constituents.

“With the real-time dashboard and data analysis from Ride Report, the Austin Transportation Department has been able to manage shared mobility in a way that works for everyone using our streets and sidewalks. With each passing day, we improve our understanding of the role of shared mobility in our transportation network and how it can help move us closer to our goals for economic growth, equity, and sustainability.”

- Joseph Al-hajeri, Shared Mobility Services Supervisor, City of Austin

Protecting privacy

Ride Report believes privacy is a fundamental right that should be protected regardless of which mode of transportation you choose. Our software is intentionally designed to allow cities to manage their streets without risking citizens' privacy. Ride Report is committed to data security.

Get started

Ride Report will help you manage your micromobility program with less time, fewer staff resources, and reduced headaches.
